Where is EV demand growing, and where is fast charging lagging behind?

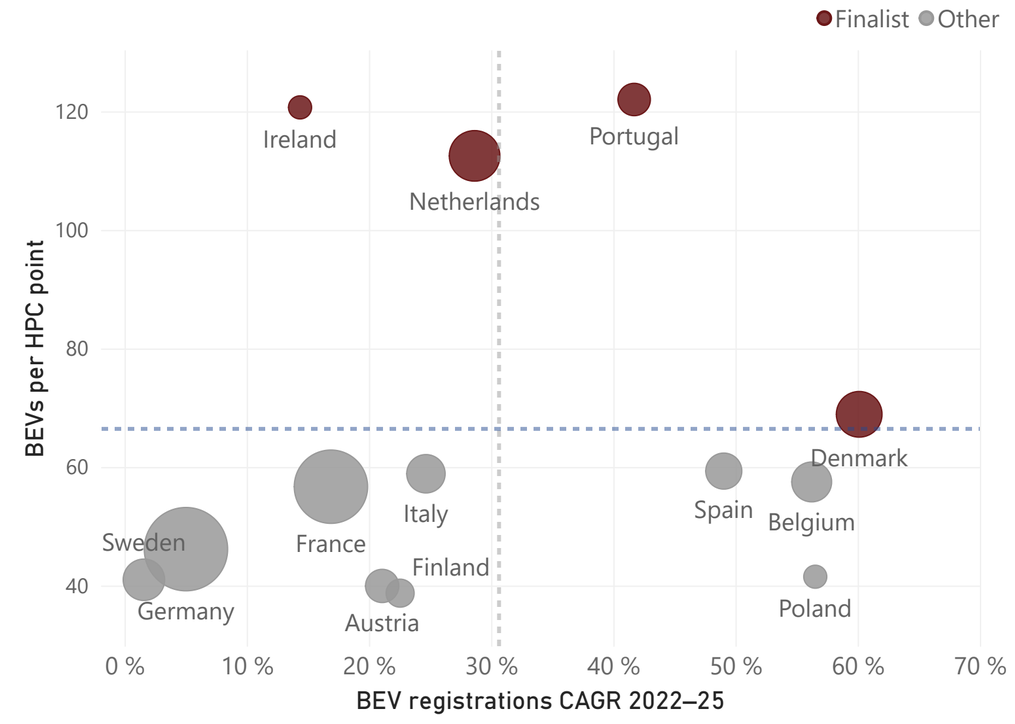

EU27 · BEV fleet end-2025 (Eurostat) · charging points September 2026 (EAFO)

Fast-charging gap: BEVs per HPC point (markets above 100k BEVs)

BEV fleet (end-2025)	Public charging points	BEVs per HPC point
7,6 mill.	1,18 mill.	53,9

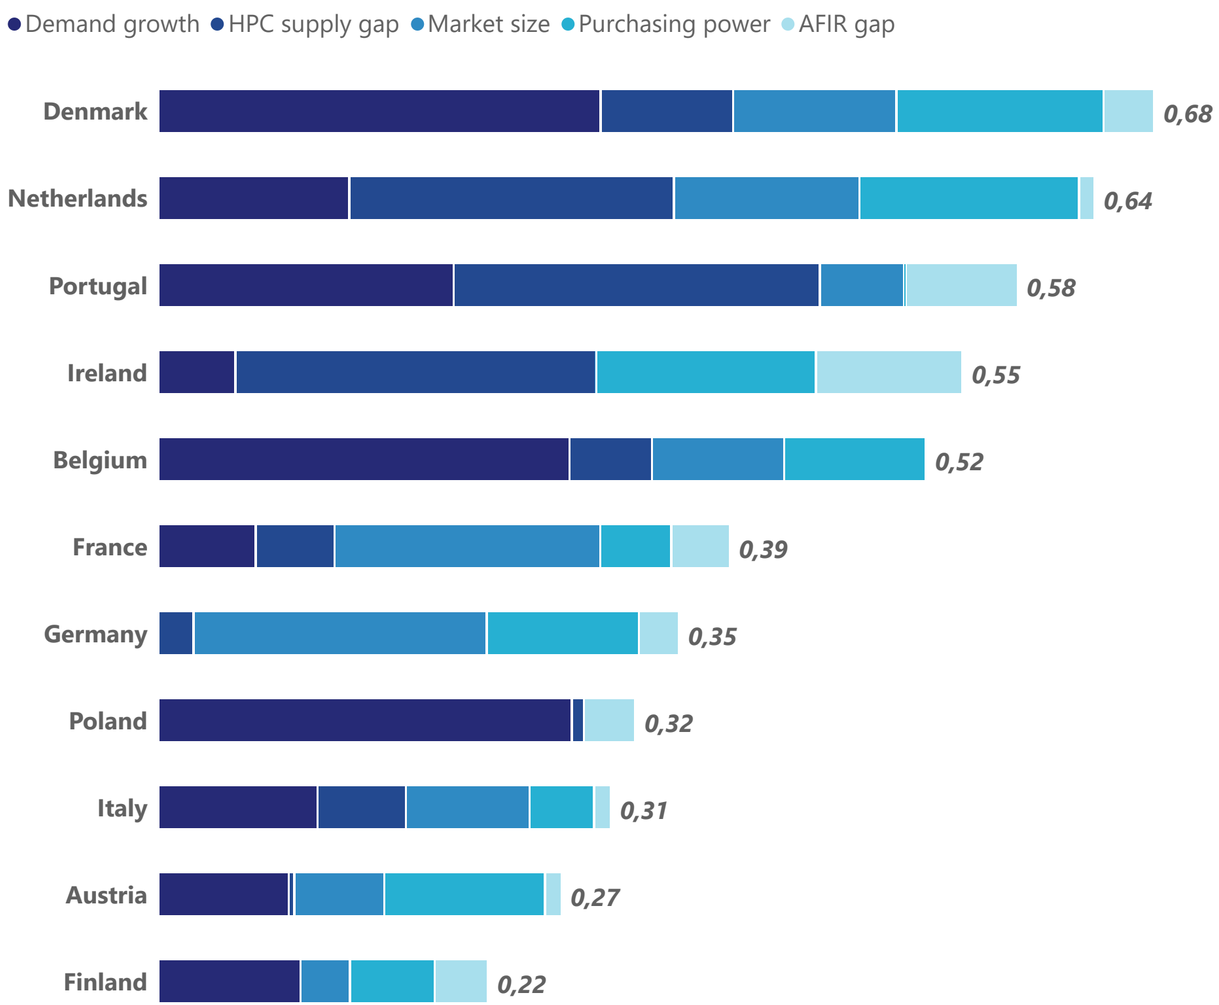

Finalists combine fast growth with a large fast-charging gap

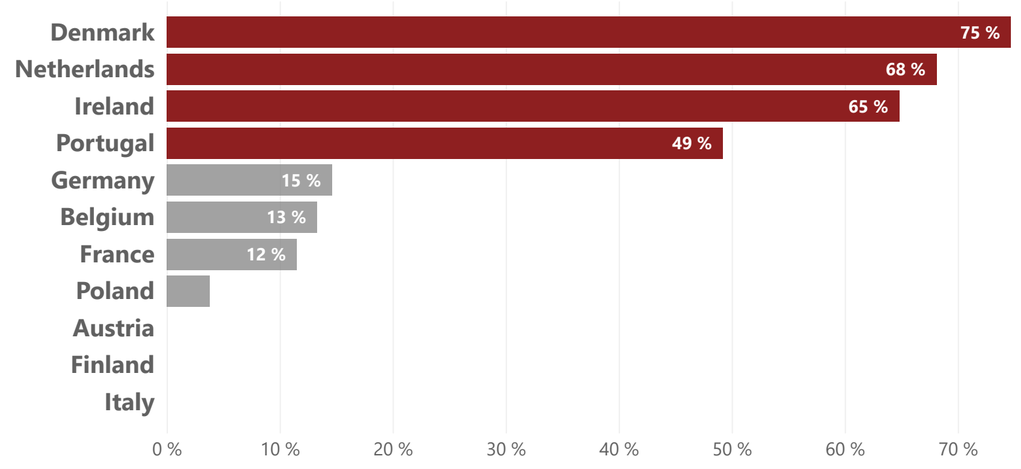

Which markets are most attractive, and how robust is the ranking?

11 shortlisted countries · weighted score 0–1 · 9 fixed scenarios and 1,000 Monte Carlo weight sets

Denmark leads on balance; Portugal and Ireland on the HPC gap

Only four countries make the top 3 in most simulations

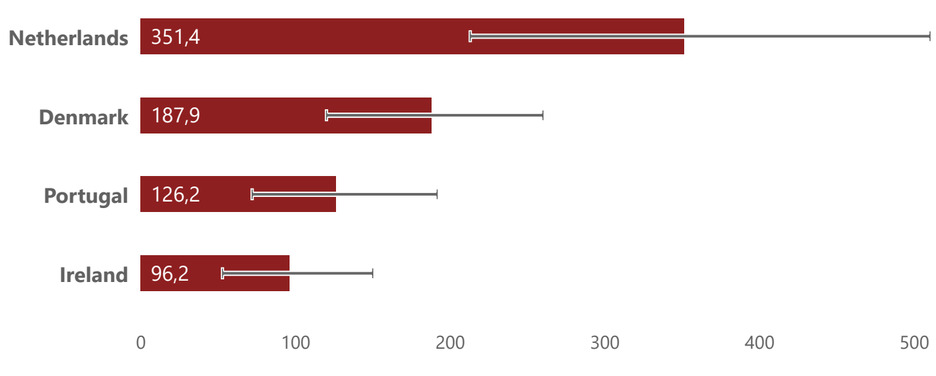

Country	Rank	Score	Top 3 (of 9)	Worst Rank	MC top3	MC first
Denmark	1	0,678	8	4	75 %	29 %
Netherlands	2	0,637	7	4	68 %	18 %
Portugal	3	0,585	6	5	49 %	12 %
Ireland	4	0,547	6	7	65 %	35 %
Belgium	5	0,522	0	6	13 %	0 %
France	6	0,388	0	7	12 %	1 %
Germany	7	0,354	0	9	15 %	6 %
Poland	8	0,324	0	11	4 %	0 %
Italy	9	0,307	0	9	0 %	0 %
Austria	10	0,273	0	11	0 %	0 %
Finland	11	0,223	0	11	0 %	0 %

How big is the prize?

Public DC charging market, 4 finalists · 2026–2030 · low / base / high scenarios · prices incl. VAT

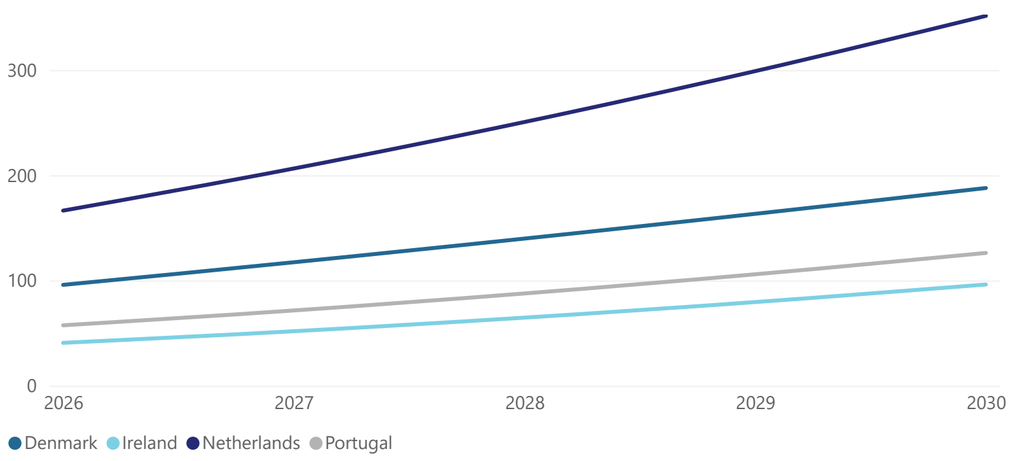

The Netherlands is the largest prize; Portugal beats Ireland in every scenario

Public DC charging market, 2030, €M · bar = base case, whiskers = low–high

All four markets nearly double by 2030

Public DC charging market, base case, €M

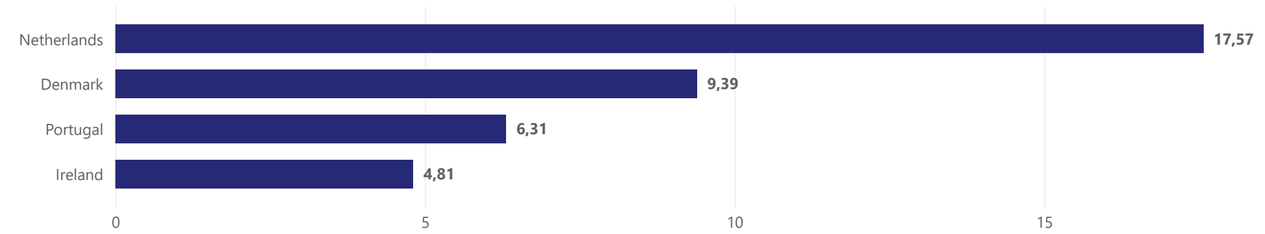

VoltaCharge target market share

5 %

Total VoltaCharge revenue 2030, 4 finalists (€M)

38,1

Potential VoltaCharge revenue in 2030 (base case) (M€)

Recommendation

1. Netherlands: largest market (€351M in 2030); fast-charging gap despite the densest AC network. Main risk: established competitors.
2. Denmark: most robust ranking (top 3 in 8 of 9 scenarios, 75% of simulations); fastest BEV growth; lowest charging price.
3. Portugal: wins the tie-break with Ireland on market size in every scenario; largest HPC gap.

Ireland: high-risk, high-reward alternative.
